Adobe Photoshop CC 2015 is another step forward in maintaining its natural place in our life. It's a streamlined update in keeping with the times, and combines the best of the software we know to create the highest quality images. But we are still "a long way" from the big data. With that in mind, we have already learned a lot of things in just a few years, and I think we need to adapt to the new world of today. Because storage space is now available to us, it is no longer limited to so many gigabytes; it's more affordable. However, such a big saving of disk space for storing images is a contrast, and particularly an exaggeration and hindrance when we have already become so dependent on it. Compared with the previous version (Adobe Photoshop CC 2014), there are seven new changes that are larger than the previous updates in the "How to Use" section of the manual. The first new change is Overall Look and Feel. I will not go into too much detail, because this is already covered in the "How you should use the software" section. Then, there are Books, the Filter Gallery, Color Picker and the Development Module. In "How to See", there are three new topics, such as Skin Detection, Adjustment Categories and the Adjustment Brush. All these new changes are helpful. Among the new changes, the adjustments for brightness and for colors in Adjustments are particularly significant. It is a pity that you cannot change the color itself while editing, but what we cannot correct at the moment we can only guess. In the meantime, it is more easily to correct the tone or highlight and shadow.
